

I claim:

Claim 1 Tuning apparatus for a stringed musical instrument comprising a body and a neck extending outwardly from said body, a plurality of strings extending from said body to said neck, means for forming a first critical point for each of said strings on said neck, means for forming a second critical point for each of said strings on a fulcrum tremolo, said fulcrum tremolo includes a base plate, said base plate being pivotally mounted about a fulcrum axis extending transversely of said strings for changing the pitch of all said strings at one time as said base plate is pivoted, separate means for mounting each of said strings on said base plate and for raising and adjusting the tension of said strings from an untensioned condition to a proper playing pitch including means for varying the spacing between said first and second critical points for changing the harmonic tuning, wherein the improvement comprises that each of said separate means for mounting each of said strings has a bridge element forming said second critical point and a string tensioning means on opposite side of said bridge element from said first critical point disposed in a variably spaced relation to said second critical point over which each of said string extends. --

Claim 2 Apparatus as set forth in claim 1 wherein said separate means has a sleeve-like member, said sleeve-like member has a first portion closer to said second critical point and a second portion more remote from said second critical point, said sleeve-like member includes a restricted interior portion between said first and second ends thereof, said string tensioning means has a first end closer to said bridge element and a second end more remote from said bridge element, said string tensioning means is displaceable between a first limiting position and a second limiting position and the first end of said string

tensioning means is in spaced relation from said bridge element in and between said first and second limiting positions. --

Claim 3 Apparatus as set forth in claim 2 wherein string tensioning means has a string passageway extending from the first end thereof toward the second end, said string arranged to extend through said string passageway and secured to said string tensioning means at said second end. --

Claim 4 Apparatus as set forth in claim 3 wherein said string tensioning means has a threaded portion extending in the direction of the first end from said second end of said string tensioning means, said string tensioning means has a string clamping means extending from said first end of said string tensioning means towards said threaded portion, and said string tensioning displacement means comprising an bolt-like member adjustably mounted in said separate means and arranged to threadedly engage said string tensioning means for displacing said string tensioning means between said first and second limiting positions. --

Claim 5 Apparatus as set forth in claim 4 wherein said string clamping means has a fork-like slotted string passageway extending from said threaded portion to said first end of said string tensioning means, said string clamping means including a clamping point at first end of said string tensioning means, said fork-like slotted string passageway has a lower fork closer to said base plate and an upper fork more remote from said base plate, said string clamping means has a annular flange-like portion in bearing contact with said restricted interior portion of said sleeve-like member, said string arranged to extend through said string passageway between said upper and lower forks, wherein as said string

tensioning means is displaced in and between said first and second limiting positions for macro-tuning said string, said upper and lower forks are simultaneously displaced towards said string within said restricted interior portion for anchoring said string at said clamping point. --

Claim 6 A stringed musical instrument comprising an elongated neck and body attached to one end of the said neck, a tremolo device mounted on said body, a plurality of elongated strings, means on said neck for supporting and forming a first critical point for each of said strings, said tremolo device forming a support for and second critical point for each of said strings, said tremolo device comprising a fulcrum tremolo, said fulcrum tremolo including bearing means mounted on said body and supporting said fulcrum tremolo for pivotal displacement, said bearing means comprises at least one ball bearing and at least one bearing housing for adjustably positioning said bearing means relative to said body and at least one shaft is connected to said base plate through said ball bearing wherein the improvement comprises an annular flange on said shaft which spaces said bearing means away from said base plate. --

SJM

Claim 7

A stringed musical instrument comprising an elongated neck and body attached to one end of the said neck, a fulcrum tremolo mounted on said body, a plurality of elongated strings, means on said neck for supporting and forming a first critical point for each of said strings, said fulcrum tremolo forming a support for and second critical point for each of said strings, said fulcrum tremolo including counter springs with a first end closer to said second critical point and a second end further from said second critical point, said first end of said counter springs connected to said body and said second end of said counter springs connected to an attachment means on said fulcrum tremolo for counter

2021

balancing the tension of said elongated strings wherein the improvement comprises that said attachment means includes a separate means for globally tuning said fulcrum tremolo.

Claim 8 Apparatus as set forth in Claim 9 wherein said separate means comprises a spring holder means disposed in spaced relation between said first end of said counter springs and said attachment means. --

Claim 9 Apparatus as set forth in claim 8 wherein said spring holder means is displaceable between a first limiting position and a second limiting position and said spring holder means is in spaced relation from said attachment means in and between said first and second limiting positions. --

Claim 10 Apparatus as set forth in claim 9 wherein said attachment means has a threaded passageway extending in the direction of said spring holder means, said spring holder means has a threaded passageway extending in the direction of said counter springs and an unthreaded passageway extending in the direction of said attachment means, and said string holder displacement means comprises a thumb screw-like member arranged with a first threaded portion extending in the direction of said counter springs and a second threaded portion extending in the direction of said attachment means. --

Claim 11 Apparatus as set forth in Claim 10 wherein said first threaded portion of said thumb screw-like displacement means is threadedly engaged with said threaded passageway of said spring holder means and said second threaded portion of said thumb screw-like displacement means is threadedly engaged with said threaded passageway of said attachment means for

displacing said string holder means in and between said first and second limiting positions. --

Claim 12 Apparatus as set forth in claim 11 wherein said attachment means has a pin extending in the direction of said spring holder means and said pin passes through said unthreaded opening of said spring holder means for limiting the rotation of said spring holder means about said thumb screw-like displacement means. --

Claim 13 In a stringed musical instrument, means for locking and tensioning at least one string from an untensioned condition to a tuned pitched condition at one end of the neck of a stringed musical instrument, said means comprising a string locking means for said at least one string, a bracket secured to said one end of said neck, a lever pivotally secured to said bracket, said string locking means secured to said lever, said lever is L-shaped comprising a first lever arm extending angularly from a second lever arm and said lever arms secured together at an intersecting section and a pivot pin extending through said intersecting section and said bracket for pivoting and securing said lever to said bracket, a locking clamp for adjustably securing said second lever arm to said bracket, said first lever arm has a free end spaced from said intersecting section, wherein the improvement comprises that said first lever arm includes an string holder means for securing and macro-tuning said at least one string. --

Claim 14 A tuning apparatus for a stringed musical instrument, a plurality of strings extending over said stringed musical instrument, each of said strings having a first end and a second end, each of said first end of said strings having a first anchoring means on a first section of said stringed

musical instrument and each of said strings having a second anchoring means on a second section of said stringed musical instrument, separate means for raising and adjusting the tension of at least one string from an untensioned condition to a tuned pitched condition, wherein the improvement comprises that said separate means has a string securing means including said first anchoring means for macro-tuning said at least one string. --

Claim 15 Apparatus as set forth in claim 14, wherein said string securing means has a first end closer to said second anchoring means and a second end further to said second anchoring means, said string securing means is displaceable between a first limiting position and a second limiting position and the first end of said string securing means is in spaced relation from said second anchoring means and in between said first and second limiting positions.--

Claim 16 Apparatus as set forth in claim 15 wherein each said separate means includes a sleeve-like member with a first section closer to said second anchoring means and a second section closer said second anchoring means, said first end of said string securing means has a string passageway closer to said second anchoring means extending in the direction between said first and second ends thereof, said string securing means has a threaded portion further from said second anchoring means extending in the direction between said first and second ends thereof, and said string securing displacement means comprising an bolt-like member adjustably mounted in said sleeve-like member and arranged to threadedly engage said string securing means for displacing said string securing means in and between said first and second limiting positions. --

Claim 17

Apparatus as set forth in claim 16, said sleeve-like

member has a first slot arranged in said first section thereof, a first side of said sleeve-like member associated with said first slot, said string securing means has a fork-like string passageway extending from said first end thereof towards said second end of said string securing means, said fork-like string passageway means has an upper fork closer to said first slot and an lower fork more remote from said first slot, said upper fork has an unthreaded passageway transverse the direction of said fork-like passageway, said lower fork has a threaded passageway transverse the direction of said fork-like passageway, said upper and lower forks are displaceable between an open position and a closed position. --

Claim 18

Apparatus as set forth in claim 17, wherein said

upper and lower fork displacement means comprising a thumb screw-like member adjustably arranged to pass through said first slot of said sleeve-like member, through said unthreaded passageway of said upper fork and threadedly engage said threaded passageway of said lower fork for displacing said upper and lower forks in and between said open and closed positions towards said string for clamping and securing said at least one string. --

Claim 19

Apparatus as set forth in claim 18, wherein said

sleeve-like member has a second slot extending from said first section of said sleeve-like member towards said second section thereof adjacent said fork-like string passageway and continuing disposed at an angle towards said first side of said sleeve-like member associated with said first slot wherein said at least one string is arranged to extend through said second slot and into said fork-like string passageway between said upper and lower forks.--

Claim 20

Apparatus as set forth in claim 13 wherein string

holder means for securing and macro-tuning said at least one string is said string
securing means for macro-tuning said at least one string as set forth in claim 14. --

Claim 21

Apparatus as set forth in claim 16, wherein said

sleeve-like member includes a restricted portion between first and second section
thereof, said string securing means has a string passageway extending from the
first end thereof toward the second end, said string arranged to extend through
said string passageway and secured to said string securing means, said string
securing means includes a string clamping means, said string clamping means in
and between said first and second ends of said string securing means, said string
clamping means has a fork-like slotted string passageway extending from said
threaded portion to said first end of said string securing means, said string
clamping means including a clamping point at first end of said string securing
means, said fork-like slotted string passageway has a first fork and second fork,
said string clamping means has a annular flange-like portion in bearing contact
with said restricted portion of said sleeve-like member, said string arranged to
extend through said string passageway and between said first and second forks,
wherein as said string clamping means is displaced in and between said first and
second limiting positions said first and second forks are displaced within said
restricted portion of said sleeve-like member for securely clamping said string at
said clamping point. --

Claim 22

Apparatus as set forth in claim 18 is part of a

tremolo device wherein said first end of said string securing means is adjacent to
said second critical point. --
